

# Breast Ultrasound

Under the provision of the *Health Professions Act of Alberta*, a regulated member who has completed advanced training, approved by Council, may be authorized by the Registrar to apply non-ionizing radiation for the purpose of ultrasound imaging. This additional authorization is applicable to all MRT specialties.

Currently, the College endorses an approved avenue of study, consisting of both didactic and clinical components, as appropriate training for the radiological technologist to apply non-ionizing radiation for the purposes of ultrasound of the breast.
